## Dashboard napkin drawing before feedback:

### **Visualization Feedback:**

Widnie Dorilas:

for the first of the visualizations, have you guys thought of doing a word map? for the second one will you do a t test for the correlation? I think four might work better as a scatterplot based on the data possibly. I might be misunderstanding how 7 can be shown as a heatmap what do you mean by that?

Yiqing Guo:

Good use of slicers! For the income vs number of restaurants will that be a histogram? And are ratings on yelp continuous data or discrete? If they are discrete you might want to use a histogram again for ratings vs income.

### **Dashboard Feedback:**

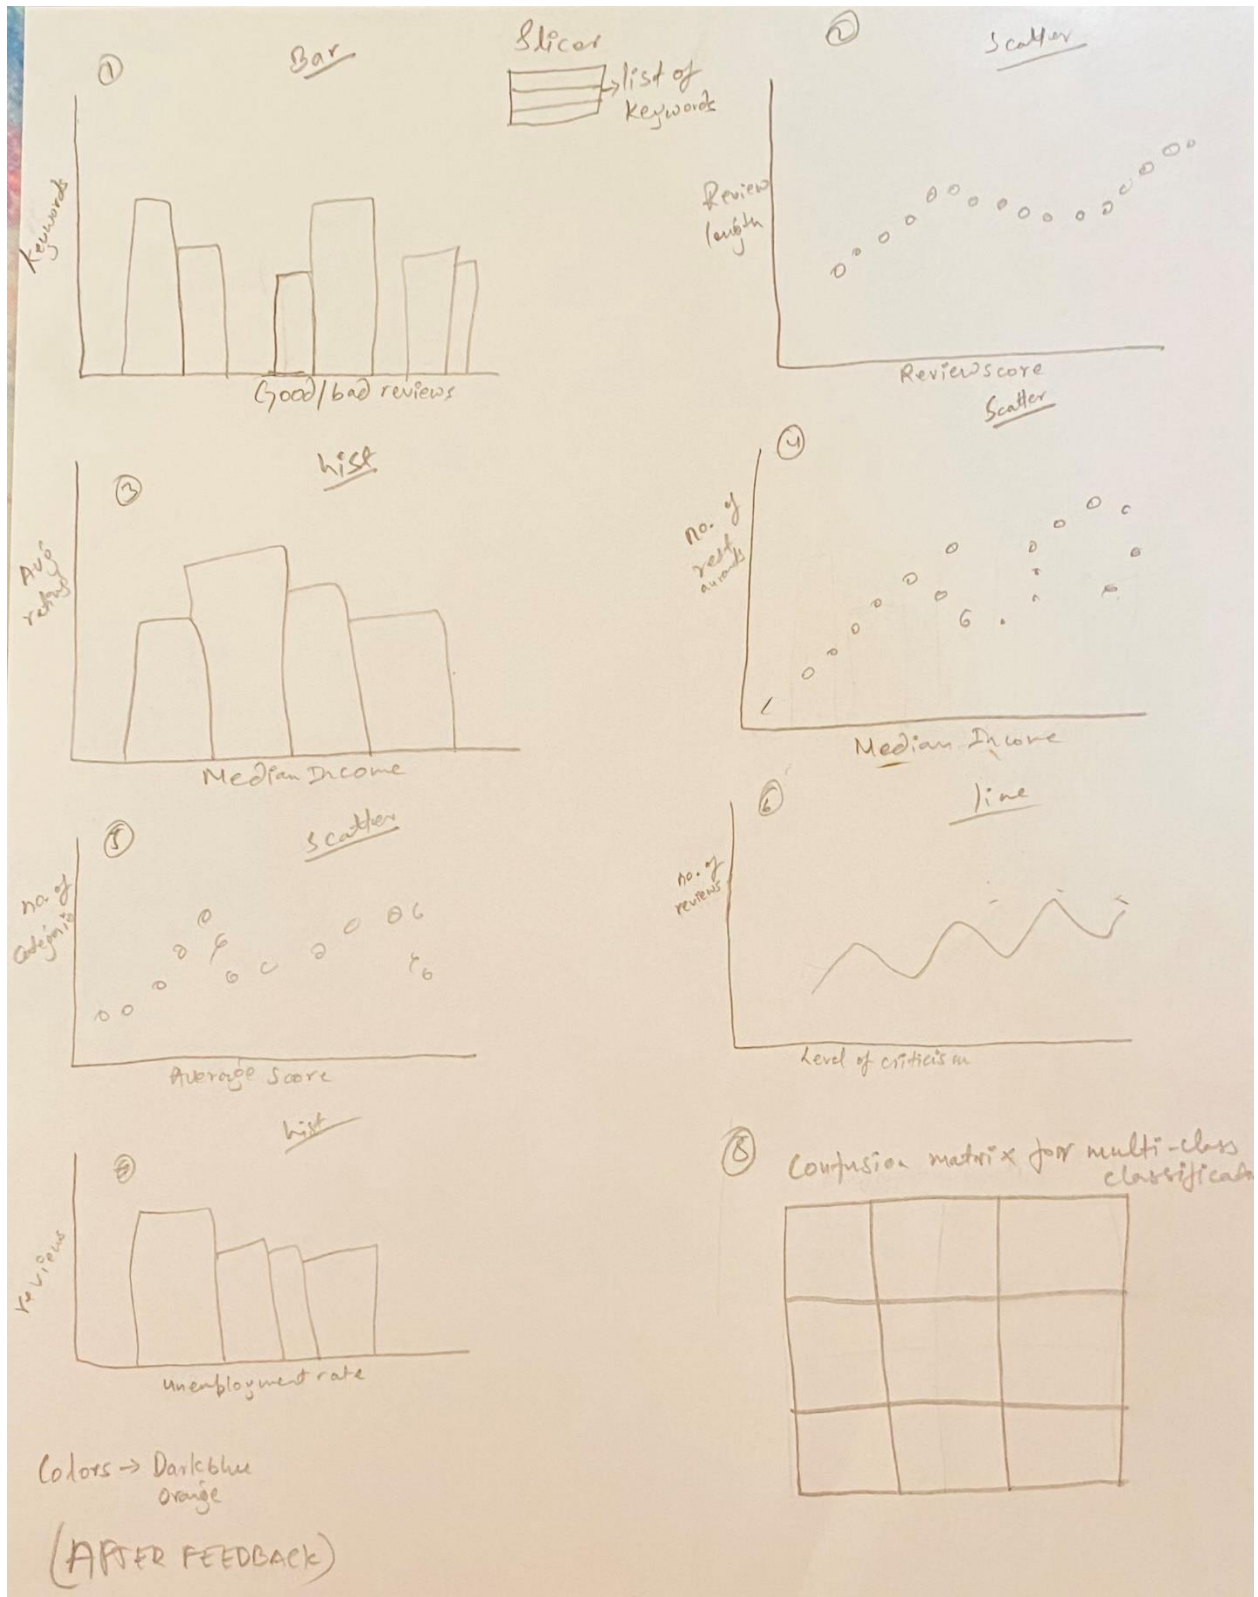

Widnie Dorilas:

I love the layout of your dashboard. for the keywords maybe have the top 5 most used keywords for each review? maybe include more of how your color theme will be distributed.

Yiqing Guo:

I really like your dashboard! maybe you could have a top 5 best restaurants visualization in the dashboard for fun, using whatever metric.
